It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

COLUMN 17

Line 47, "tat" should read --that--.  
Line 49, "or" should read --of--.  
Line 56, "1-1were" should read --1-1 were--.

COLUMN 18

Line 60, "( See Fig. 8A.)" should read --(See Fig. 8A.)  
Then, Step-b through Step-d of Example 1-1 were followed.  
(Step-e)

Liquid drops of an aqueous solution of PAME as used in Step-e of Example 2 was applied to each electron-emitting device to produce a precursor film of an electroconductive film by means of a bubble-jet type ink-jet device. The conditions of this step were so selected as to produce circular precursor films having a diameter of 100 $\mu$ m. Then, the precursor films were heat-treated at 300°C for 10 minutes to produce electroconductive films of PdO fine particles.

( Step-f)

The electric resistance of each electron-emitting device was observed and those having a resistance deviating from a reference value by more than 20% were rejected.

A rod provided with a piece of silicon rubber having a diameter of 200 $\mu$ m and a thickness of 500 $\mu$ m was pressed against each defective electron-emitting device to cause the silicon rubber to suck the electroconductive film, which was then removed.

(Step-g)

An electroconductive film was formed as in Step-e to replace the removed electroconductive film.

The following steps were the same as those of Example 1-1.

The resulting image-forming apparatus operated excellently for displaying images without noticeable unevenness in the brightness as in the case of Example 1-1.

(Example 8)--.
